5A. Reports in the Gym Membership Application

Aim:

To create and configure reports for the Gym Membership application in Zoho Creator so that membership records can be viewed, edited, grouped, summarized and visualized for front-desk and management activities.

Definition:

A report presents records collected through a form. Different report layouts support different tasks: lists show details, spreadsheets support grid-based work, visual views show status, dates or locations, and analytical views summarize counts and trends.

Report Design:

Report / View	Configuration and Purpose
All Members List - List	Show member name, contact, plan, membership type and fee status; sort newest enrollments first.
Members Spreadsheet - Spreadsheet	Display attendance, payment status and renewal due date for operational updates.
Membership Status Kanban - Kanban	Group member cards by Enquiry, Enrolled, Active and Expired.
Membership Start Calendar - Calendar	Use preferred start date and display daily starting counts for induction planning.
Member Residential Map - Map	Plot residential locations; distinguish membership plans with pin colors.
Enrollment Activity Timeline - Timeline	Use enrollment submission time and weekly count labels to show enrollment activity.
Plan by Membership Type - Pivot Table	Cross-tabulate membership plan and membership type using member counts.
Plan Popularity - Chart	Compare member counts across Monthly, Quarterly and Annual plans.
Trainer-wise Summary - Summary	Summarize member counts by assigned trainer; retain unassigned members.

Procedure:

1. Open the Gym Membership application in edit mode and select Membership_Enrollment_Form as the base for member reports.

2. Create All_Members_List with the required member columns, plan/type/fee filters and descending enrollment timestamp sort.

3. Create Members_Spreadsheet with attendance, fee status and renewal due date. Configure Front Desk permissions so only the intended operational fields can be changed.

4. Create Membership_Status_Kanban using Status as the grouping field. Display the member name and plan on cards.

5. Create Membership_Start_Calendar using Preferred_Start_Date. Restrict relevant dates to the current and next month and use the daily starting-count labels.

6. Create Member_Residential_Map using Residential_Address and set plan-based pin formatting. Ensure records have suitable location data.

7. Create Enrollment_Activity_Timeline using Enrollment_Submitted_On and weekly grouping/count labels. Use the configured refresh logic to update labels.

8. Create Plan_By_MembershipType_Pivot with plan rows, membership-type columns and member counts; show empty combinations as zero.

9. Create Plan_Popularity_Chart as a bar/column comparison of membership plans using member count as the measure.

10. Create Trainer_Wise_Summary grouped by Assigned_Trainer_Lookup. Check that members without trainers remain visible as an unassigned group.

11. Save the reports, open them with sample records and compare totals between views. Test intended edits, filters, calendar drill-down and Kanban status changes.

Configuration Checks:

Confirm that spreadsheet restrictions work under the Front Desk account, status changes update the timestamp, map pins match stored locations and analytical totals match the source records. The supplied screenshots document displayed output; they do not show every permission or interaction test.

Output - Spreadsheet and Kanban:

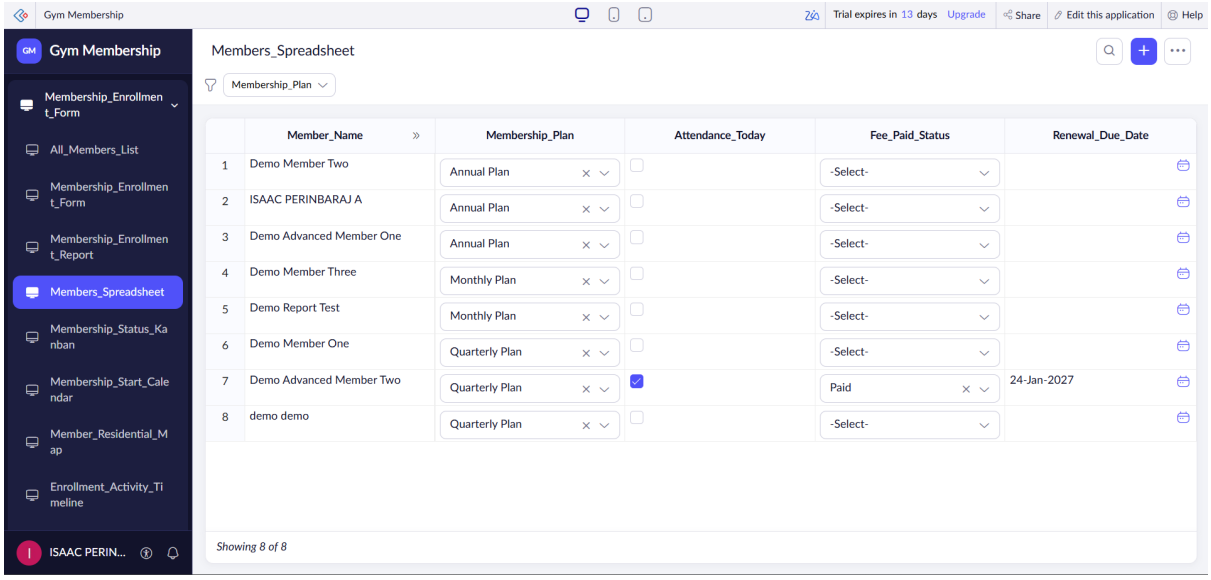

Figure 1. Members Spreadsheet displaying eight records, attendance, fee status and renewal date.

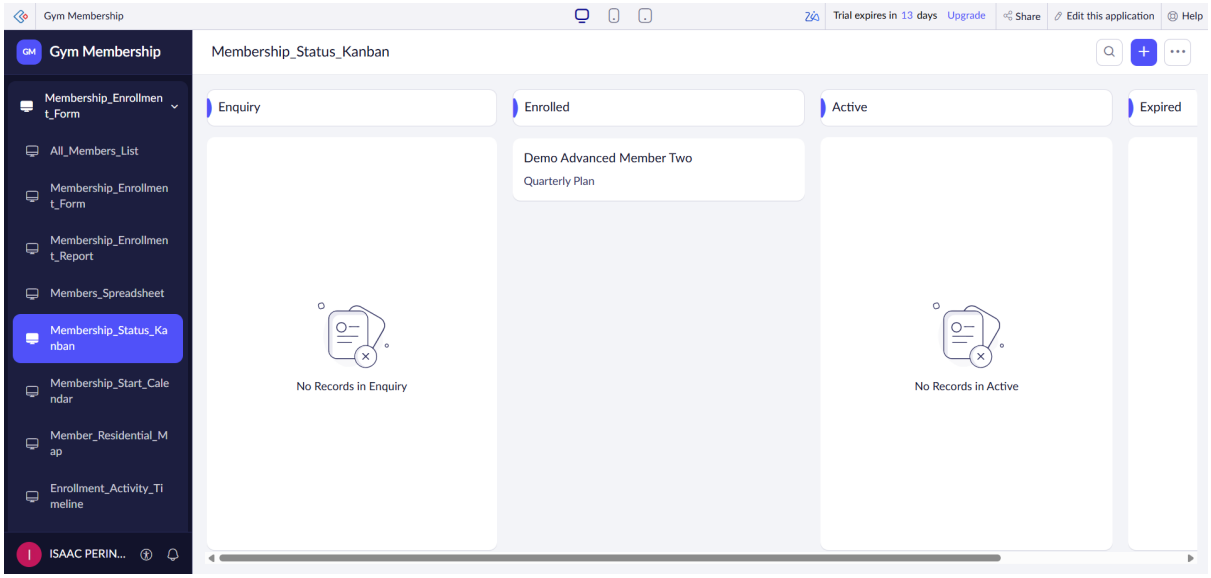

Figure 2. Membership Status Kanban with a sample member in the Enrolled column.

The spreadsheet supports operational data review. The Kanban groups records by membership status. A single board screenshot shows the current state, rather than a before-and-after card movement.

Output - Calendar and Map:

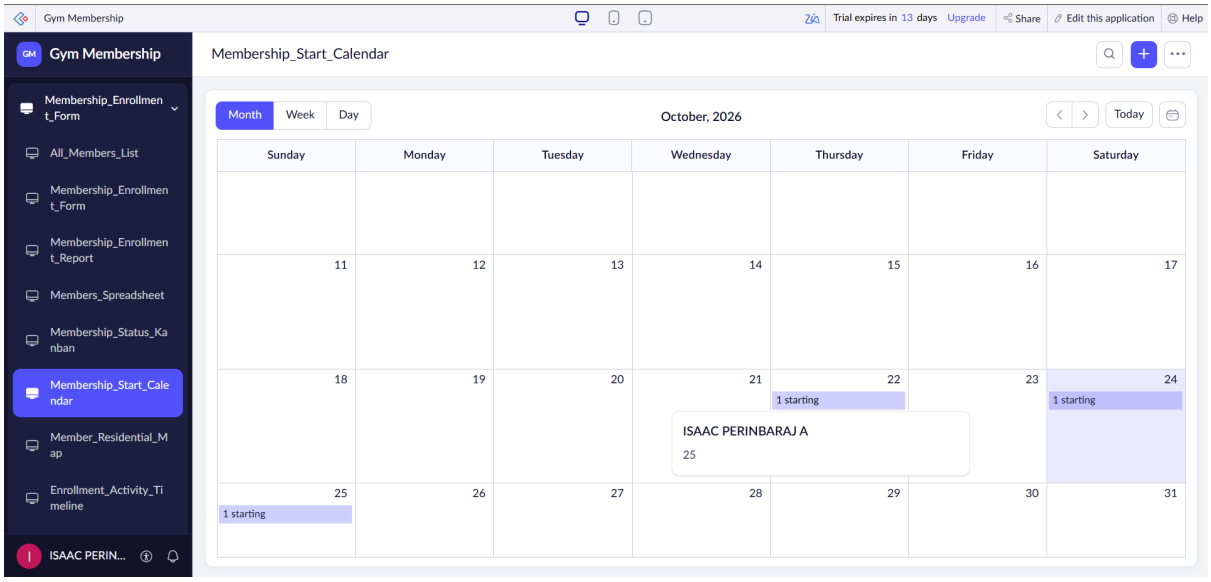

Figure 3. Membership Start Calendar showing daily starting counts and member details.

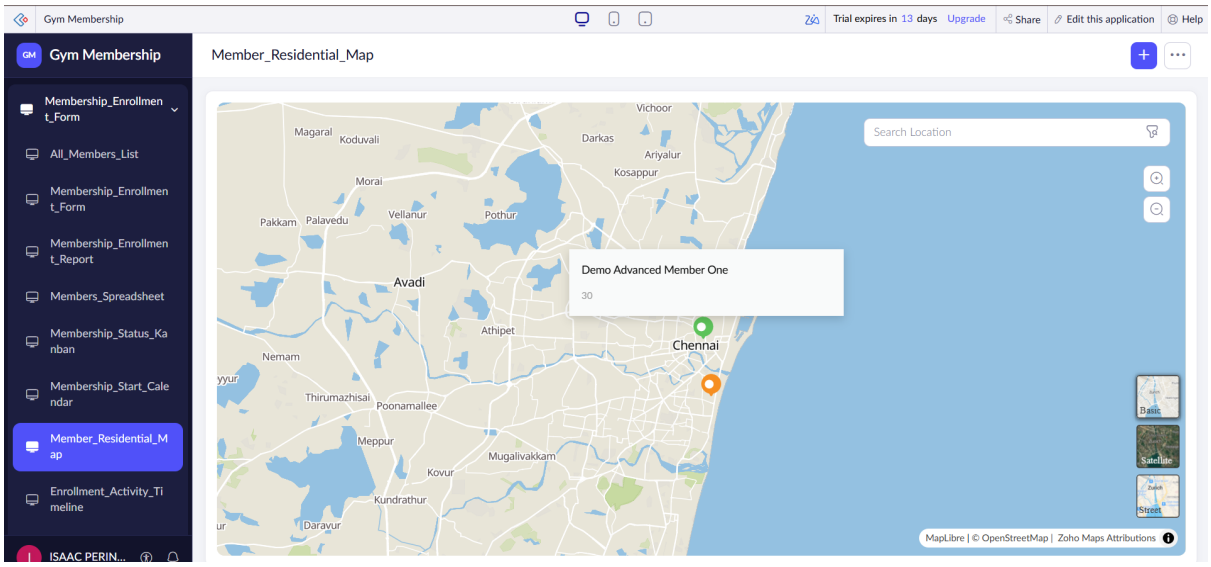

Figure 4. Member Residential Map showing colored location pins and a member detail popup.

The calendar supports date-based induction planning. The map offers a geographical view of member records for outreach and service planning.

Output - Timeline and Pivot Table:

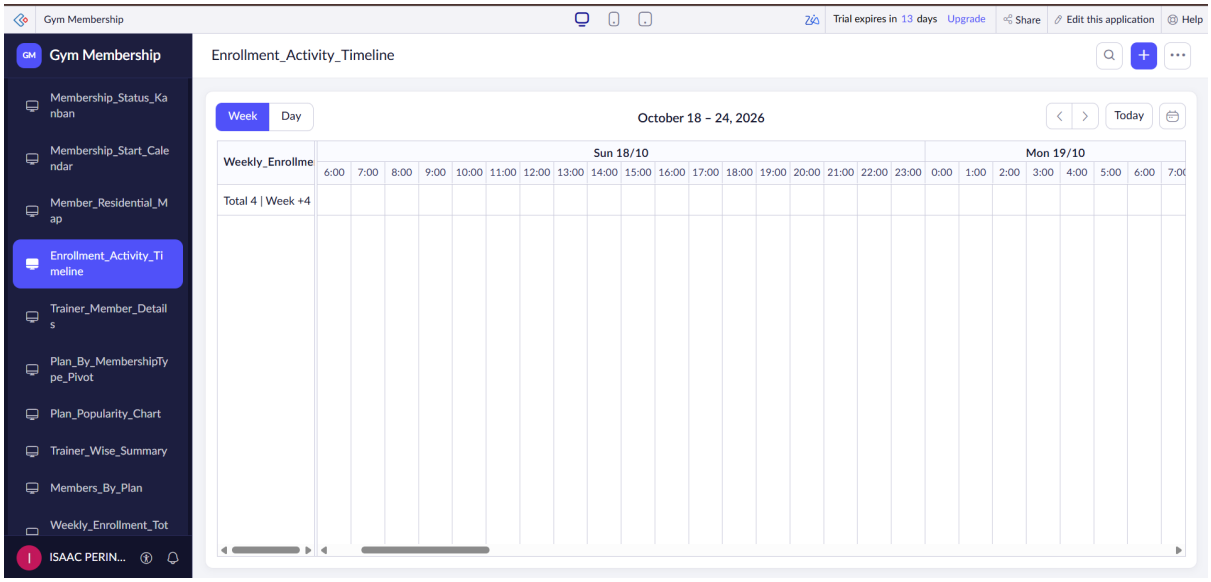

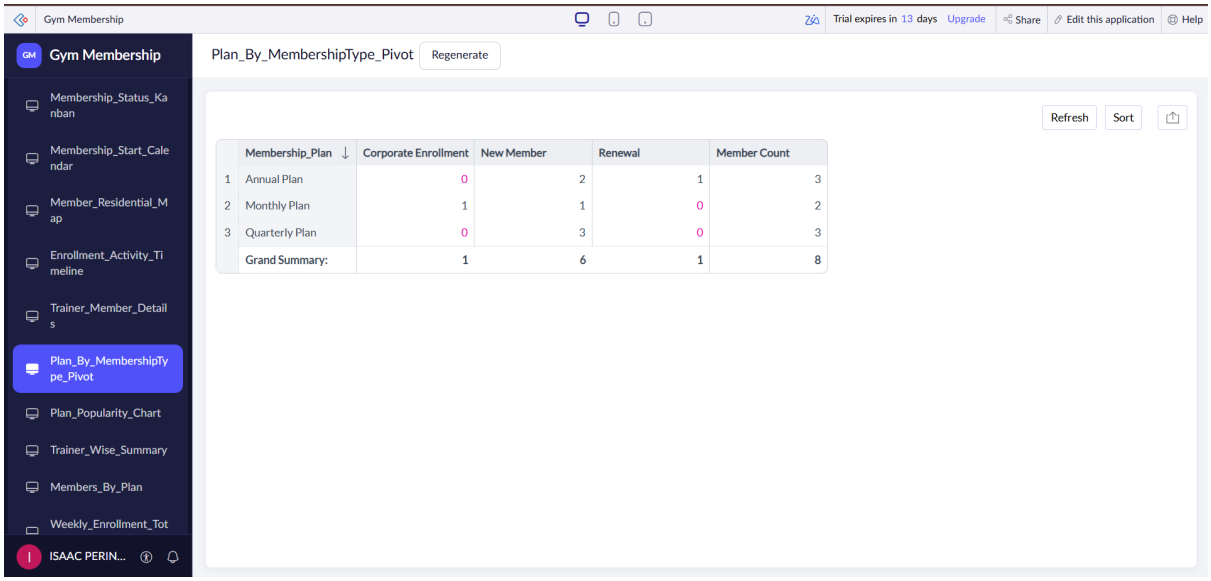

Figure 5. Enrollment Activity Timeline with a weekly enrollment summary label.

	Membership_Plan	Corporate Enrollment	New Member	Renewal	Member Count
1	Annual Plan	0	2	1	3
2	Monthly Plan	1	1	0	2
3	Quarterly Plan	0	3	0	3
	Grand Summary:	1	6	1	8

Figure 6. Plan-by-Membership-Type pivot with a grand total of eight members.

The pivot shows three Annual, two Monthly and three Quarterly members. By membership type, it shows six new members, one renewal and one corporate enrollment. The timeline is captured at a different displayed count and should be refreshed when checking consistency.

Output - Chart and Date-grouped Report:

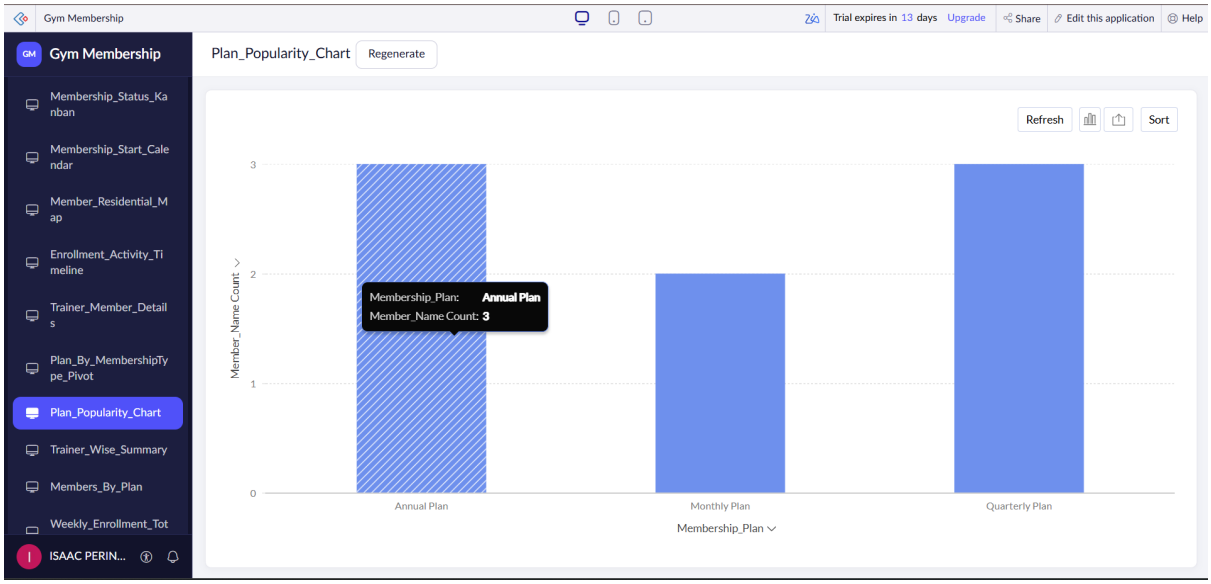

Figure 7. Plan Popularity Chart showing Annual: 3, Monthly: 2 and Quarterly: 3.

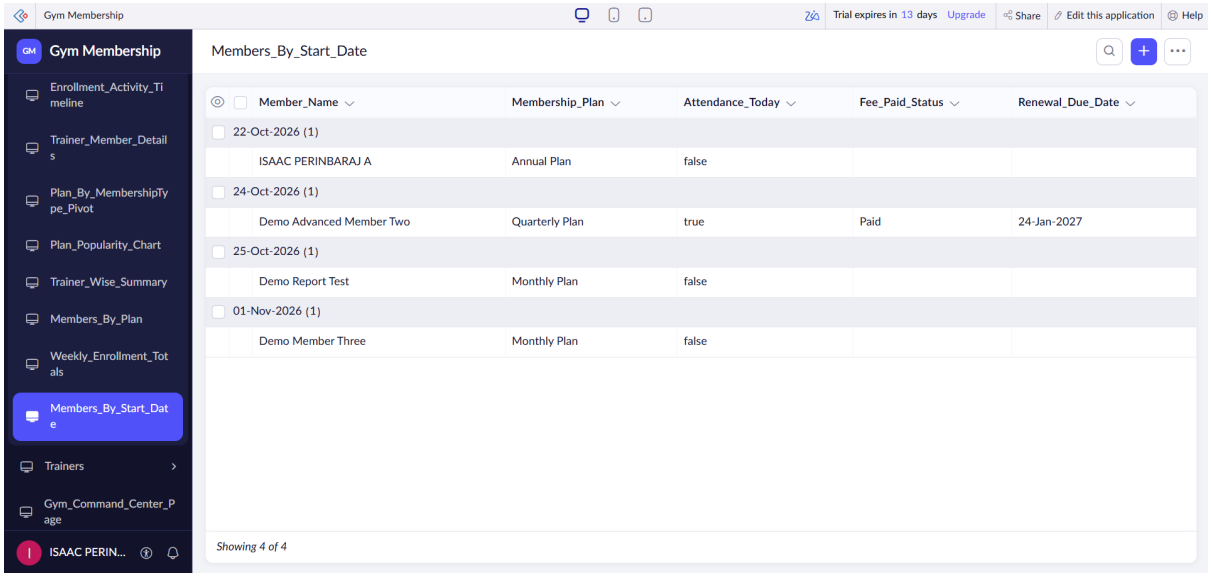

Figure 8. Members by Start Date report grouping four relevant records by their preferred starting date.

Result:

Gym Membership report outputs were documented using Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table and Chart views, together with a date-grouped list. The pivot and popularity chart agree on eight members. The report design also includes All Members List and Trainer-wise Summary; their dedicated output screenshots are not included in this record.
