5B. Gym Membership Command Center Page

Aim:

To design a custom Command Center page in Zoho Creator that combines enrollment monitoring, member search, membership status, reference content and quick actions in a single workspace.

Definition:

A custom page combines visual elements, embedded forms and reports, scripts and widgets. The Page Builder arranges these components, while live mode displays records and provides the configured actions.

Page Elements and Application Mapping:

Element	Use in the Command Center
Panel	Display the Command Center heading and organize the visual layout.
Board	Present membership stages through the embedded Membership Status Kanban report.
Chart	Compare enrollment counts by membership plan.
Gauge	Show monthly new-member enrollment progress against a demo target of 50.
Search	Find members using name, phone number or formatted membership ID.
Form	Embed Membership Enrollment for walk-in data entry.
Report	Embed the full Membership Enrollment report for detailed review.
Snippets	Display shared gym rules and waiver content.
Button	Call the renewal-reminder function.
Widgets	Display trainer availability and class information from configured demo schedules.
Viewer	Provide a custom document-viewer widget area; verify document output in live mode.

Procedure:

1. Open the Gym Membership application and create or edit Gym_Command_Center_Page in the Page Builder.

2. Add a heading panel and arrange an overview area, processing workspace, detailed report area and reference components.

3. Configure the gauge to count New Member records submitted in the current month and set the demo target to 50.

4. Add a plan-popularity chart using Membership_Plan and record count.

5. Configure member search to open All_Members_List using matching names, phone numbers or formatted membership IDs.

6. Embed Membership_Status_Kanban and place the shared gym rules and waiver snippet beside it.

7. Add a Send renewal reminders button linked to Send_Renewal_Reminders. Its defined date range includes today through the following six days.

8. Embed Membership_Enrollment_Report and Membership_Enrollment_Form, then add the document-viewer and trainer/class widgets.

9. Save and open the page in live mode. Check displayed totals, search results, form submission, report access and widget output. Test document display and role-based access separately.

Output - Page Builder Overview:

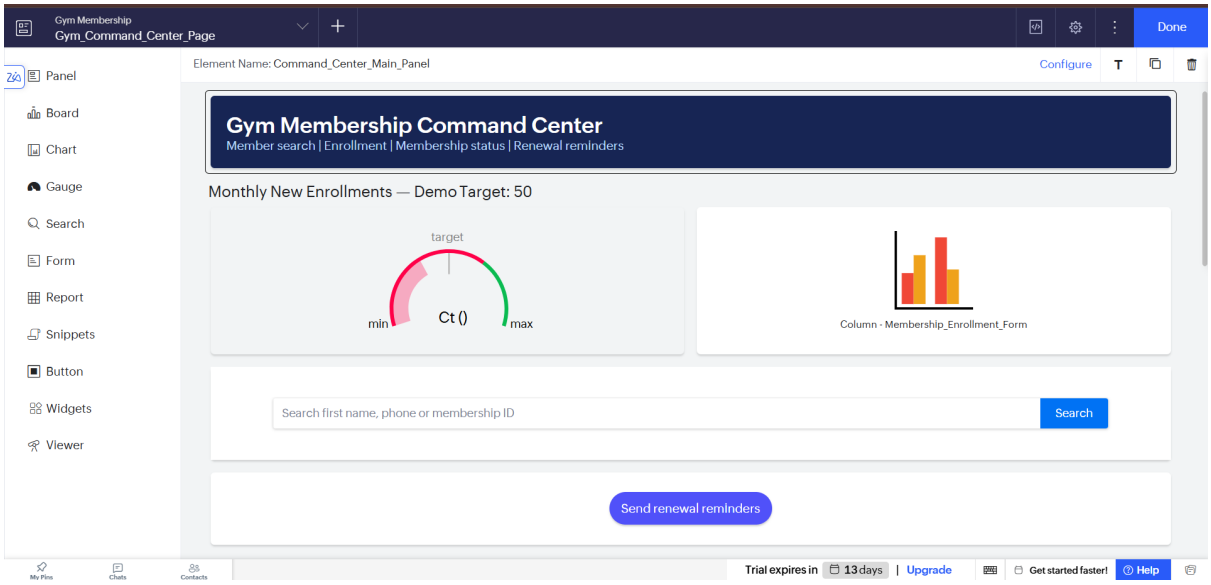

Figure 1. Page Builder showing the panel, gauge, chart, search and renewal button layout.

Output - Page Builder Components:

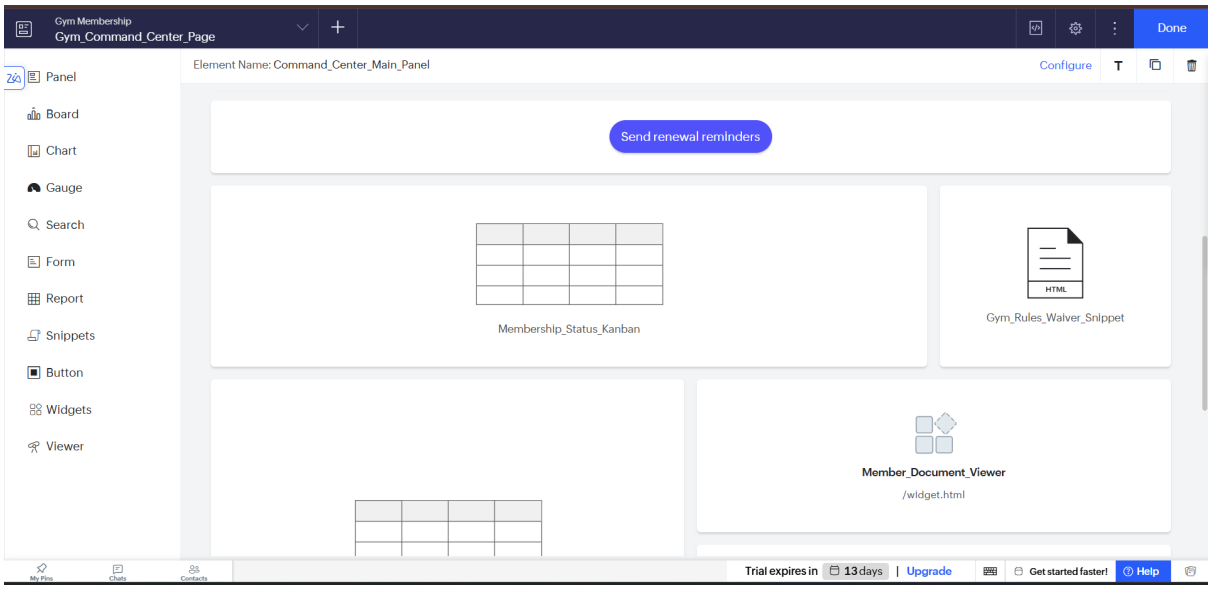

Figure 2. Embedded Kanban report, rules snippet and custom document-viewer widget in the editor.

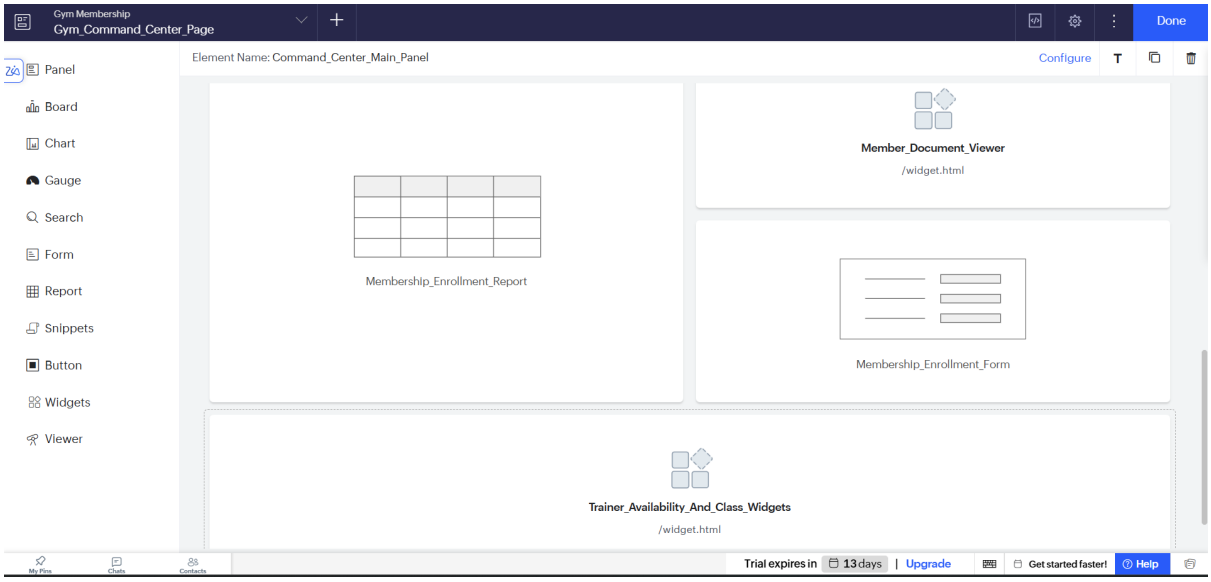

Figure 3. Embedded report and enrollment form, document-viewer widget and trainer/class widget.

Editor placeholders identify embedded components and custom widgets. The membership board is implemented through a Kanban report, and Member_Document_Viewer is shown as a custom widget. These are the implementations visible in the supplied page.

Output - Live Command Center:

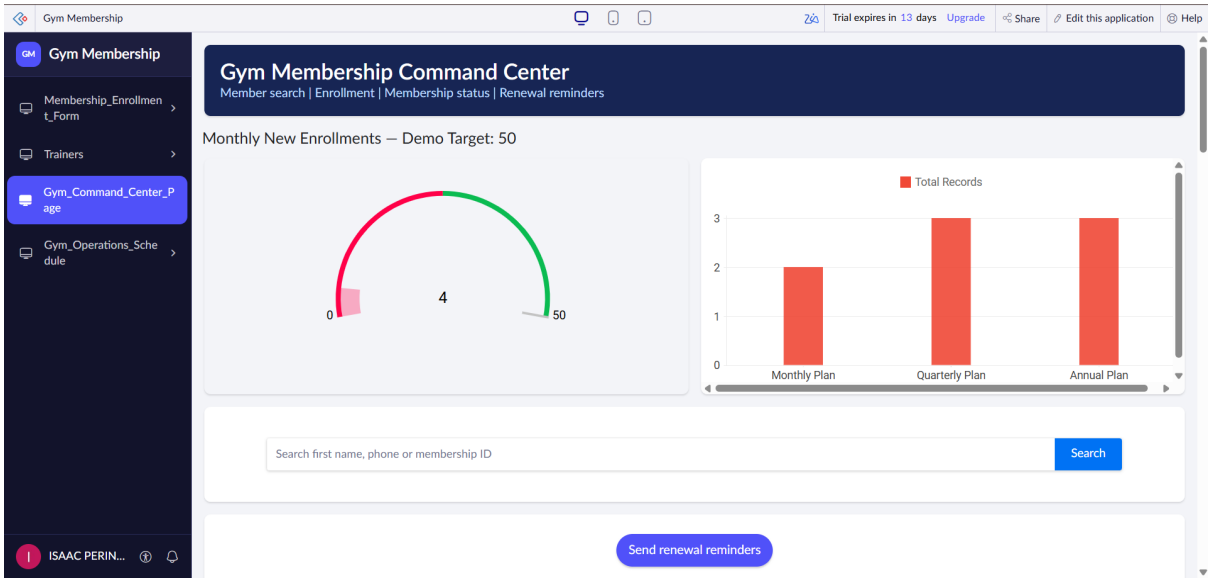

Figure 4. Live gauge showing 4 toward a target of 50, plan-count chart, search and renewal button.

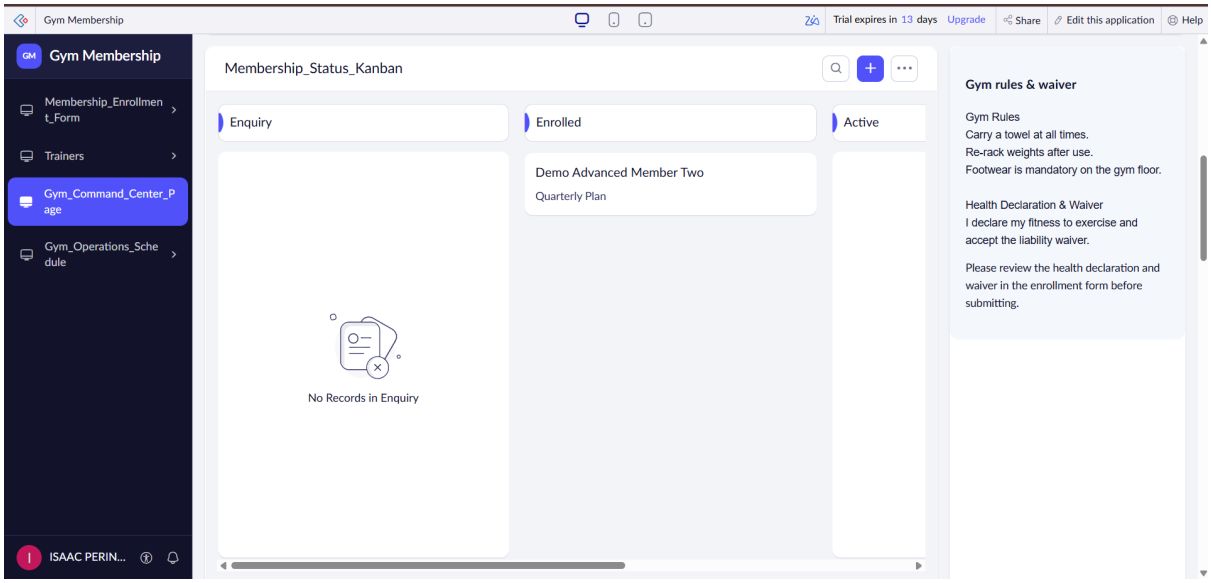

Figure 5. Live membership-status Kanban alongside the gym rules and waiver snippet.

The chart displays two Monthly, three Quarterly and three Annual records. The gauge shows four because it applies the current-month New Member filter rather than counting all eight membership records.

Output - Trainer and Class Widget:

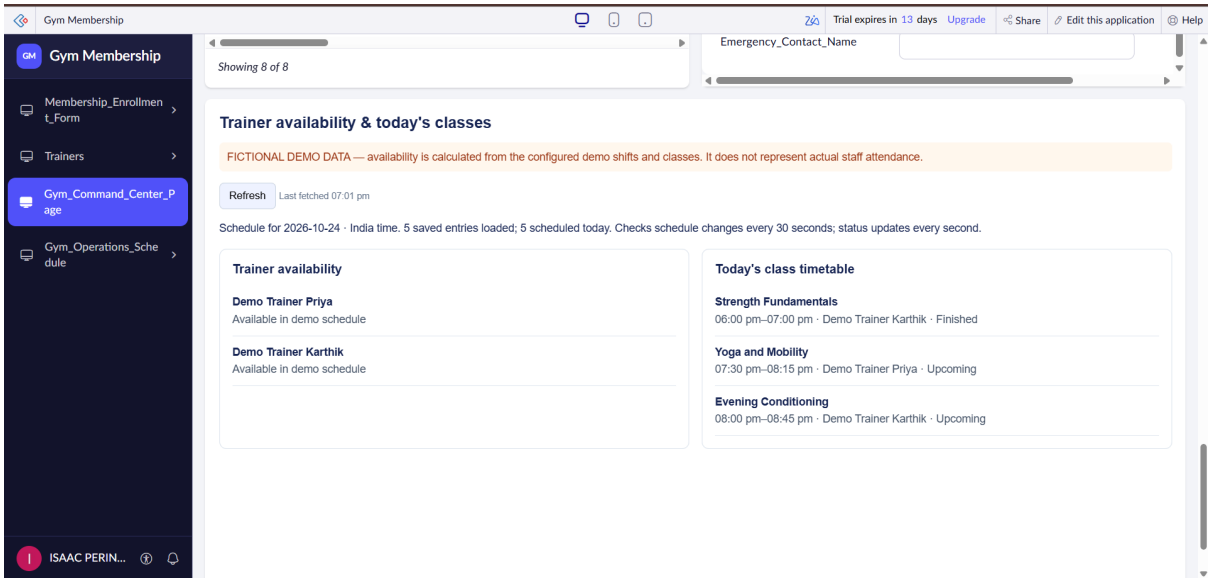

Figure 6. Live trainer availability and class timetable based on fictional demonstration schedule data.

Observations:

The widget displays two demo trainers and three class entries, with status labels based on the configured schedule. It explicitly identifies the data as fictional and does not establish actual staff attendance.

The editor shows the embedded form, report and document-viewer widget. The supplied live screenshots do not show a document opened in the viewer or the outcome of a renewal-email action.

Search, card movement, walk-in submission and account-specific permissions should be checked in live mode to confirm their end-to-end behavior.

Result:

The Gym Membership Command Center page was designed with monitoring, search, report, enrollment and reference components. Supplied live views demonstrate the gauge, plan chart, embedded membership-status report, rules snippet and trainer/class widget. The document-viewer widget is present in the editor; successful document rendering and action outcomes require separate verification.
